 Environmental Quality Incentives Program (EQIP) CAUV Tax Reduction

Property coordinates (report in WGS 84, decimal degrees.)

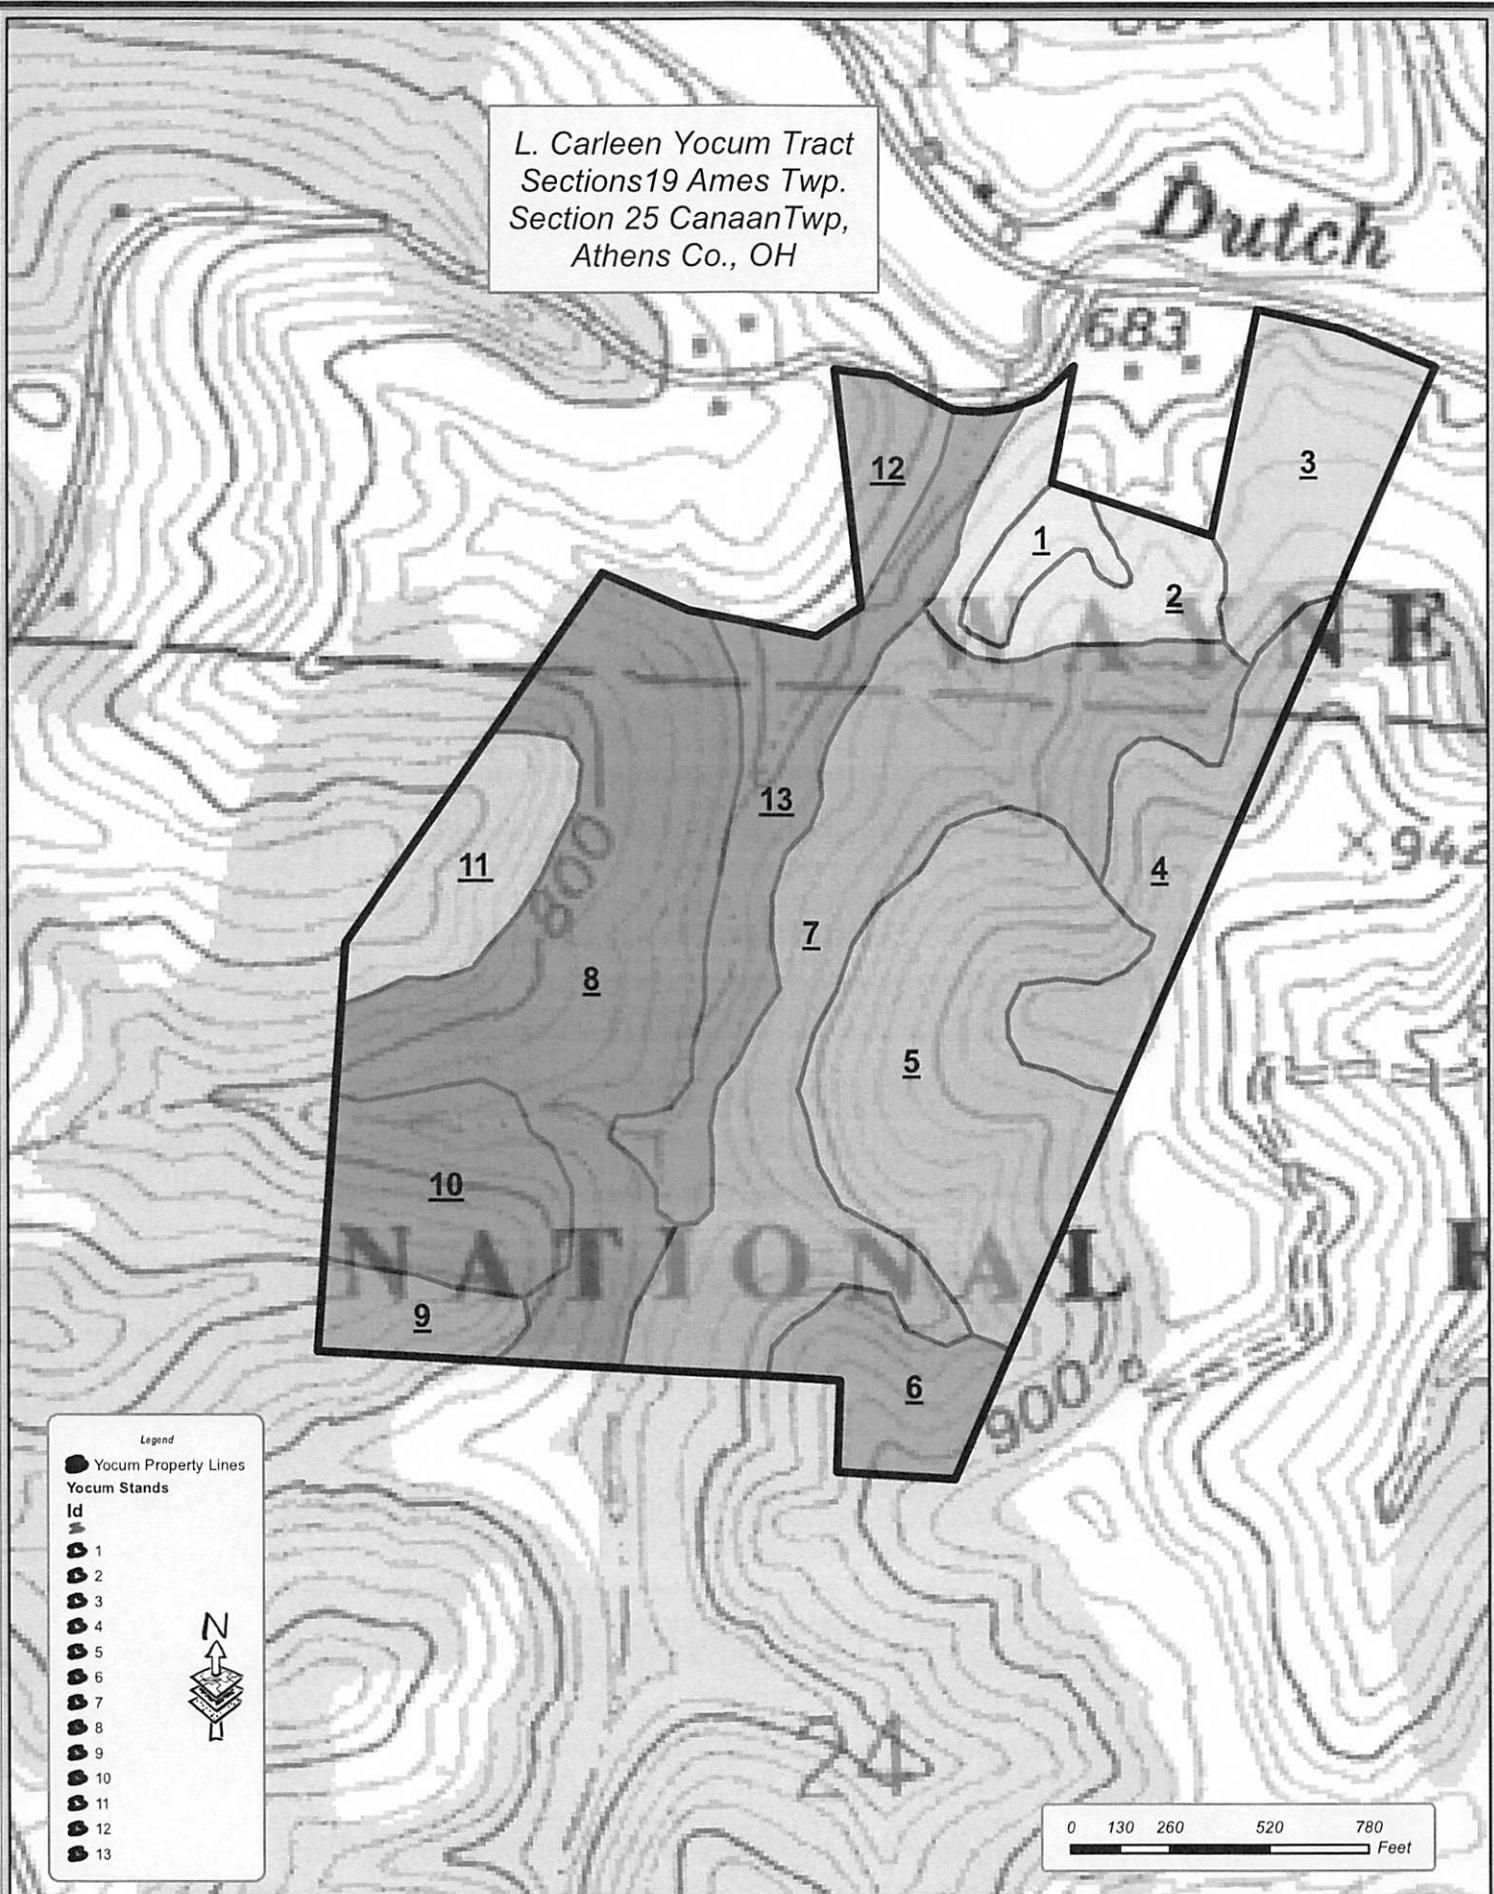

Longitude: N 39.37158 Latitude: W 82.01366

Landowner Management Objectives

This Management Plan guides all natural resource management for the indicated parcel of land ("Dutch Creek Property") for the next 10 years. It describes resources conditions, proposed treatments and practices and desired objectives and outcomes. The plan is based on information informally gathered since initial purchase in 2010, and from a systematic general forest inventory conducted by the owner during 2011 and 2012. As a plan, it is subject to adjustments as more information is gathered.

1. Manage the property for all attributes and opportunities that exist in the natural undeveloped ecosystem, which is of interest to the owner. These include: recreation, wildlife management, soil and water management, forest protection, timber and non-timber products management, and other compatible conservation uses.
2. Create interest and appreciation in the many intangible values such as songbirds, wildflowers, plants, mushrooms, nuts, and flowering shrubs which are all a part of the managed forest land.
3. Maintain and improve the productivity of this forestland.
4. Protect and improve the condition of this land for future generations
