General Woodland Description

Athens County is located in the unglaciated hill country of southeastern Ohio. Slope and erosion hazard is the major land use limitations. Seasonal wetness, droughtiness, flood hazard, and the moderately slow to very slow permeability of some soils also limit land use.

Athens County is in the central hardwood forest region. Major forest types include Appalachian hardwoods, bottomland hardwoods, oak-hickory, successional, Virginia pine, and white pine plantations. Most of the woodland in Athens County is in areas of steep and very steep terrain. This terrain is well suited to trees. Timber and pulpwood production are important forest products in Athens County.

Situated in the rolling hills of southeastern Ohio, this farm was purchased by the Campitelli's in March of 2012. The previous owner had planted a variety of conifer species for Christmas trees. Previous owners had also harvested some of the forested areas on this farm.
