

J.Korpall Development, LLC Property
Woodland Stewardship Management Plan

Owner: J. Korpall Development, LLC C/O Jeff Korpall
Address: 3956 Patterson Rd
Bay City, MI 48706
Phone: 989-671-9050
County: Athens Township: Lodi Section No. 10
Location: 0 Shade Creek Rd., Guysville, OH
Directions: Please refer to enclosed Stand Location Map

Woodland Stewardship Acreage:	53.34	Non-woodland Stewardship Acreage*:	0 ac.
Total Property Acres	56.71		

This plan was written to qualify the landowner's woodland for the programs checked below:

- Ohio Forest Tax Law American Tree Farm Program
 Environmental Quality Incentives Program (EQIP) CAUV

Property coordinates (report in WGS 84, decimal degrees.)

Latitude: 39.239470 N Longitude -81.995364 W

LANDOWNER OBJECTIVES

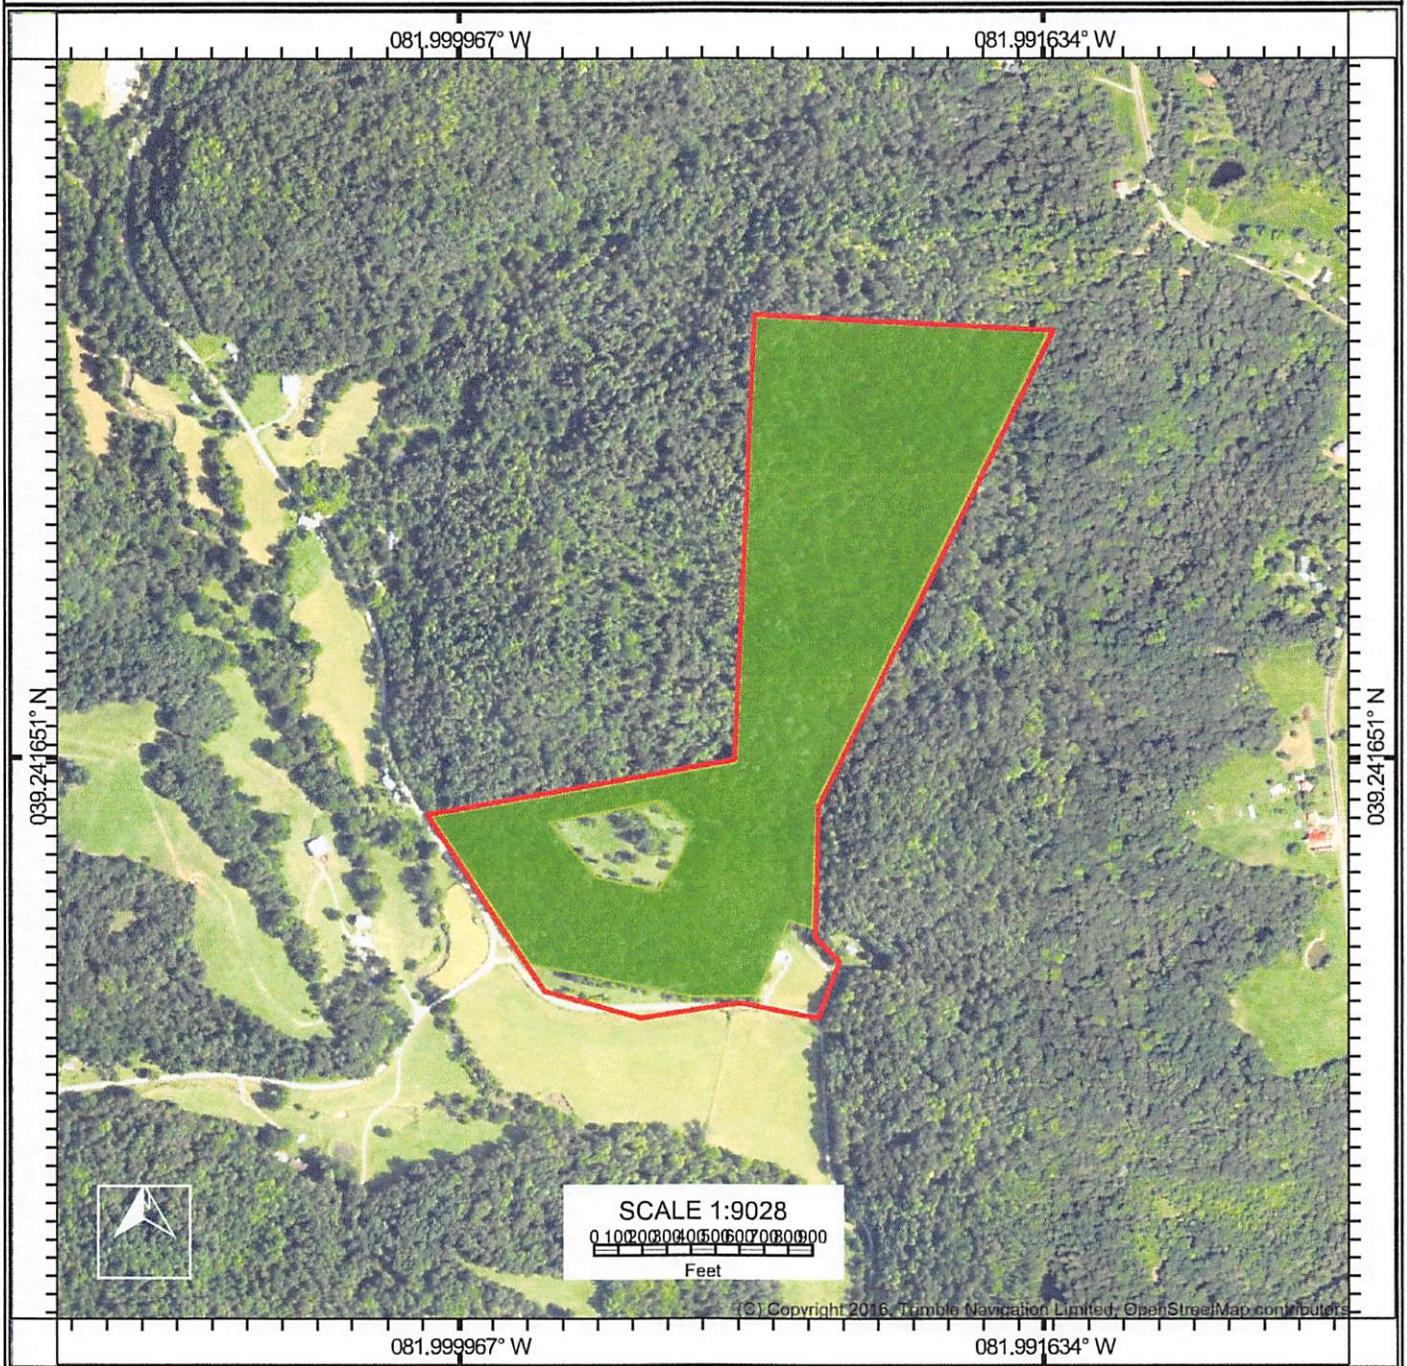

1. PROVIDE FOR SUSTAINABLE COMMERCIAL TIMBER & FIBER PRODUCTION
2. PROMOTE STEWARDSHIP & ENHANCEMENT OF CONSERVATION VALUES
3. RESTORE NATURAL HABITAT AREAS & PROMOTE NATIVE VEGETATION
4. CONTROL INVASIVE SPECIES
5. PROTECT AIR, WATER AND SOIL RESOURCES
6. ENJOY RECREATIONAL USE OF PROPERTY

General Woodland Description

This forested property is a mix of upland eastern hardwoods that lies in the glaciated Allegheny & Appalachian Plateaus. These common hardwood forest types are found along ridge-tops, coves, ravines and along steep slopes that extend through-out the Appalachian Mountains and foothills. Stands are generally characterized by a large number of dominant and co-dominant tree species and by the great diversity of their mixture. The species and their proportions vary considerably because of lack of previous forest management, differing past treatments, earlier timber harvests and/or natural stand disturbances on sites of differing quality, aspect, elevation and latitude.

In almost all of the stands the woodland shows the result of years of neglect from past cuttings without proper planning for future timber crops. This has resulted in some stands with a lack of desirable tree species. However, in other areas, stocking rates of acceptable tree species are more than adequate to maintain appropriate stand density, tree spacing and basal area levels for high quality saw-timber production. Upland central hardwoods can be grown at a wide range of stand densities and still fully utilize the growing space. However, diameter growth of individual trees will vary greatly within different density ranges.

Recommended Forest Management Activity Schedule

Year(s) Suggested	Stand Number	Required Task	Acres	Recommendations: <i>See Addendum's**</i>
2018-2028	1	<input type="checkbox"/>	53.34	Do Nothing! <i>Continue to let stand grow naturally; No commercial timber thinning or regeneration harvest suggested suggested for at least another 10 years.</i>
2018-2028	1	<input checked="" type="checkbox"/>	53.34	Cull Tree Removal: <i>Timber Stand Improvement**</i>
2018-2028	1	<input checked="" type="checkbox"/>	53.34	Crop Tree Release: <i>Timber Stand Improvement**</i>
2018-2028	1	<input checked="" type="checkbox"/>	53.34	Timber Stand Improvement: <i>Light Grapevine Control</i>
2023		<input type="checkbox"/>		Have Forester Re-inspect Woodlands: <i>Every 5 years</i>
2028		<input checked="" type="checkbox"/>		Update Forest Management Plan: <i>Update Plan every 10 years</i>

****Refer to technical handouts enclosed in Forest Management Plan - Addendum's Section for more information on recommended and suggested Forest Management Activities.**

- It is advisable to follow the techniques used for timber stand improvement in the publication "TSI - A guide for improving your woodlot by cutting firewood" **
