### Landowner Management Objectives

1. Manage the property for all attributes and opportunities that exist in the natural undeveloped ecosystem, which is of interest to the owner. These include: recreation, wildlife management, soil and water management, forest protection, timber products management, and other compatible conservation uses.
2. To maintain this land in its natural state and allow it to develop into a mature forest.

### General Woodland Description

Athens County is located in the unglaciated hill country of southeastern Ohio. Slope and erosion hazard is the major land use limitations. Seasonal wetness, droughtiness, flood hazard, and the moderately slow to very slow permeability of some soils also limit land use.

Athens County is in the central hardwood forest region. Most of the woodland in Athens County is in areas of steep and very steep terrain. This terrain is well suited to trees.

Mr. & Mrs. Coppola purchased this farm in 1976. This tract is a combination of 3 farms. They have resided on this tract, living at several locations on this farm, before building their current home. Roads have been established for improved access. No commercial logging (except a timber theft) has taken place for 40+ years.
