Landowner Management Objectives

1. Manage the property for all attributes and opportunities that exist in the natural undeveloped ecosystem, which is of interest to the owner. These include: recreation, wildlife management, soil and water management, forest protection, timber products management, and other compatible conservation uses.
2. Improve the habitat for whitetail deer and utilize property for hunting.
3. Employ the use of cultural treatments to improve the health of this forestland.

General Woodland Description

Athens County is located in the unglaciated hill country of southeastern Ohio. Slope and erosion hazard is the major land use limitations. Seasonal wetness, droughtiness, flood hazard, and the moderately slow to very slow permeability of some soils also limit land use.

Athens County is in the central hardwood forest region. Most of the woodland in Athens County is in areas of steep and very steep terrain. This terrain is well suited to trees.

Portions of this tract were part of a larger ownership, including several smaller parcels, that was purchased in 2005, for hunting purposes. All new property lines have been surveyed.

Property was harvested in Spring 2016 with skid trails constructed for access throughout the property
