Landowner Objectives

1. To improve timber quality for a future timber sale when commercially and silviculturally viable by accomplishing recommended treatments noted in this forest management plan.
 - a. Attempting to implement at least one treatment will be considered accomplishing this goal.
2. To improve the overall health and ecosystem services of the forest. Accomplished primarily through invasive species control (brush management) and timber stand improvement, these practices will enable exponential increase in timber growth, desirable species composition, and overall forest health.
 - a. An 80% effectiveness rating of herbicide kill of invasive species will be considered accomplishing that particular treatment, along with removing several detrimental grapevines growing on high value tree species such as black walnut and red and white oak.
 - b. Conducting timber stand improvement within at least one acre will be considered accomplishing that particular treatment.
3. To provide an assortment of wildlife habitat types, for both game and non-game species through active forest management as listed in Objective 2.
 - a. Completing one of the recommended treatments will be considered accomplishing this goal.
4. To protect water quality by limited use of herbicides, and using aquatically labeled chemicals, if applicable.
 - a. Establishment of streamside management zones (SMZs) and limiting activities in these areas will be considered accomplishing this goal.

Stand Map Topographical

Treatment Schedule

Priority (1-5)	Stand #	Practice Name	Practice Description	Planned Amount		Planned Date
				Amount	Unit	
1	1	Invasive Species Control*	Control of woody invasives, herbaceous plants, and detrimental grapevine and ferns	112.99	Acres	As label allows, 2024 - 2034; annually until controlled
	2			13.45		
	3			37.20		
	4			14.73		
	5			6.43		
2	1	Timber Stand Improvement	Removal of undesirable midstory trees, including red maple, American beech, and yellow poplar	112.99		2024 - 2029
	2			13.45		
/	All	Boundary Maintenance*	Mark and maintain property lines	/	/	2024 - 2034

Treatment Notes

- *Before entering a timber sale agreement or conducting other forestry work that is not listed in your treatment schedule, contact your forester first to ensure compliance with your approved management plan.*
- *If enrolled in a forest carbon agreement, check your contract with the project developer to ensure compliance with any restrictions that may be in place on your property.*
- *For invasive species control via herbicide application, always follow label instructions – specifically pertaining to site, application timing (season of year), and application method(s).*
- *For a list of companies able to fulfill your recommended forest treatments, please contact us.*

**This practice may be a legal requirement to ensure compliance with applicable state tax program, if enrolled.*
